

**SYSTEM AND METHOD FOR EFFECTIVELY IMPLEMENTING
A DYNAMIC USER INTERFACE IN AN ELECTRONIC NETWORK**

5

ABSTRACT OF THE DISCLOSURE

A system and method for effectively implementing a dynamic user interface in an electronic network may include a user interface application that is configured to generate a user interface upon a display of a user device
10 in the electronic network. The user interface application may generate a main widget for controlling and utilizing various types of system functionality through the user interface. The user interface application may further dynamically generate a connect widget for performing network communications procedures between the user device and one or more buddy
15 devices in the electronic network. The user interface application may also dynamically generate an alert widget for providing various types of system alert messages to a device user.
